UPDATE OF WASTE TREATMENT IN BUILDING 559- KN-030-00

Kaiser-Hill Company, L.L.C. previously notified the Colorado Department of Public Health and Environment (CDPHE) of the intent to perform a hydrolysis treatment process under Unit 881.3B in Building 559, Room 102. The treatment was performed within designated areas in gloveboxes C-13 and C-17. Staging of the material was in designated areas in gloveboxes C-14, C-15, C-18, and C-19.

To date, 8 kgs of plutonium contaminated calcium metal (D003) have been processed in the Unit. It was anticipated that the treatment unit would be closed after treatment of the additional calcium that was discovered during salt processing. The current plan is to leave the unit in a standby condition until calcium salt processing is completed. This will allow any calcium items identified to be addressed in an expeditious manner if they are discovered.

If you have any questions regarding this issue, please contact Richard Bloom of SSOC at extension 7251.
